Challenge

Ecommerce vendors often struggle with inefficient inventory tracking, leading to stockouts, overstocking, and suboptimal order fulfillment. Manual data management processes result in inaccuracies, delays in decision-making, and missed sales opportunities. Lack of insights into sales trends, customer behavior, and stock levels hinders vendors from making informed business decisions, impacting profitability and customer satisfaction.

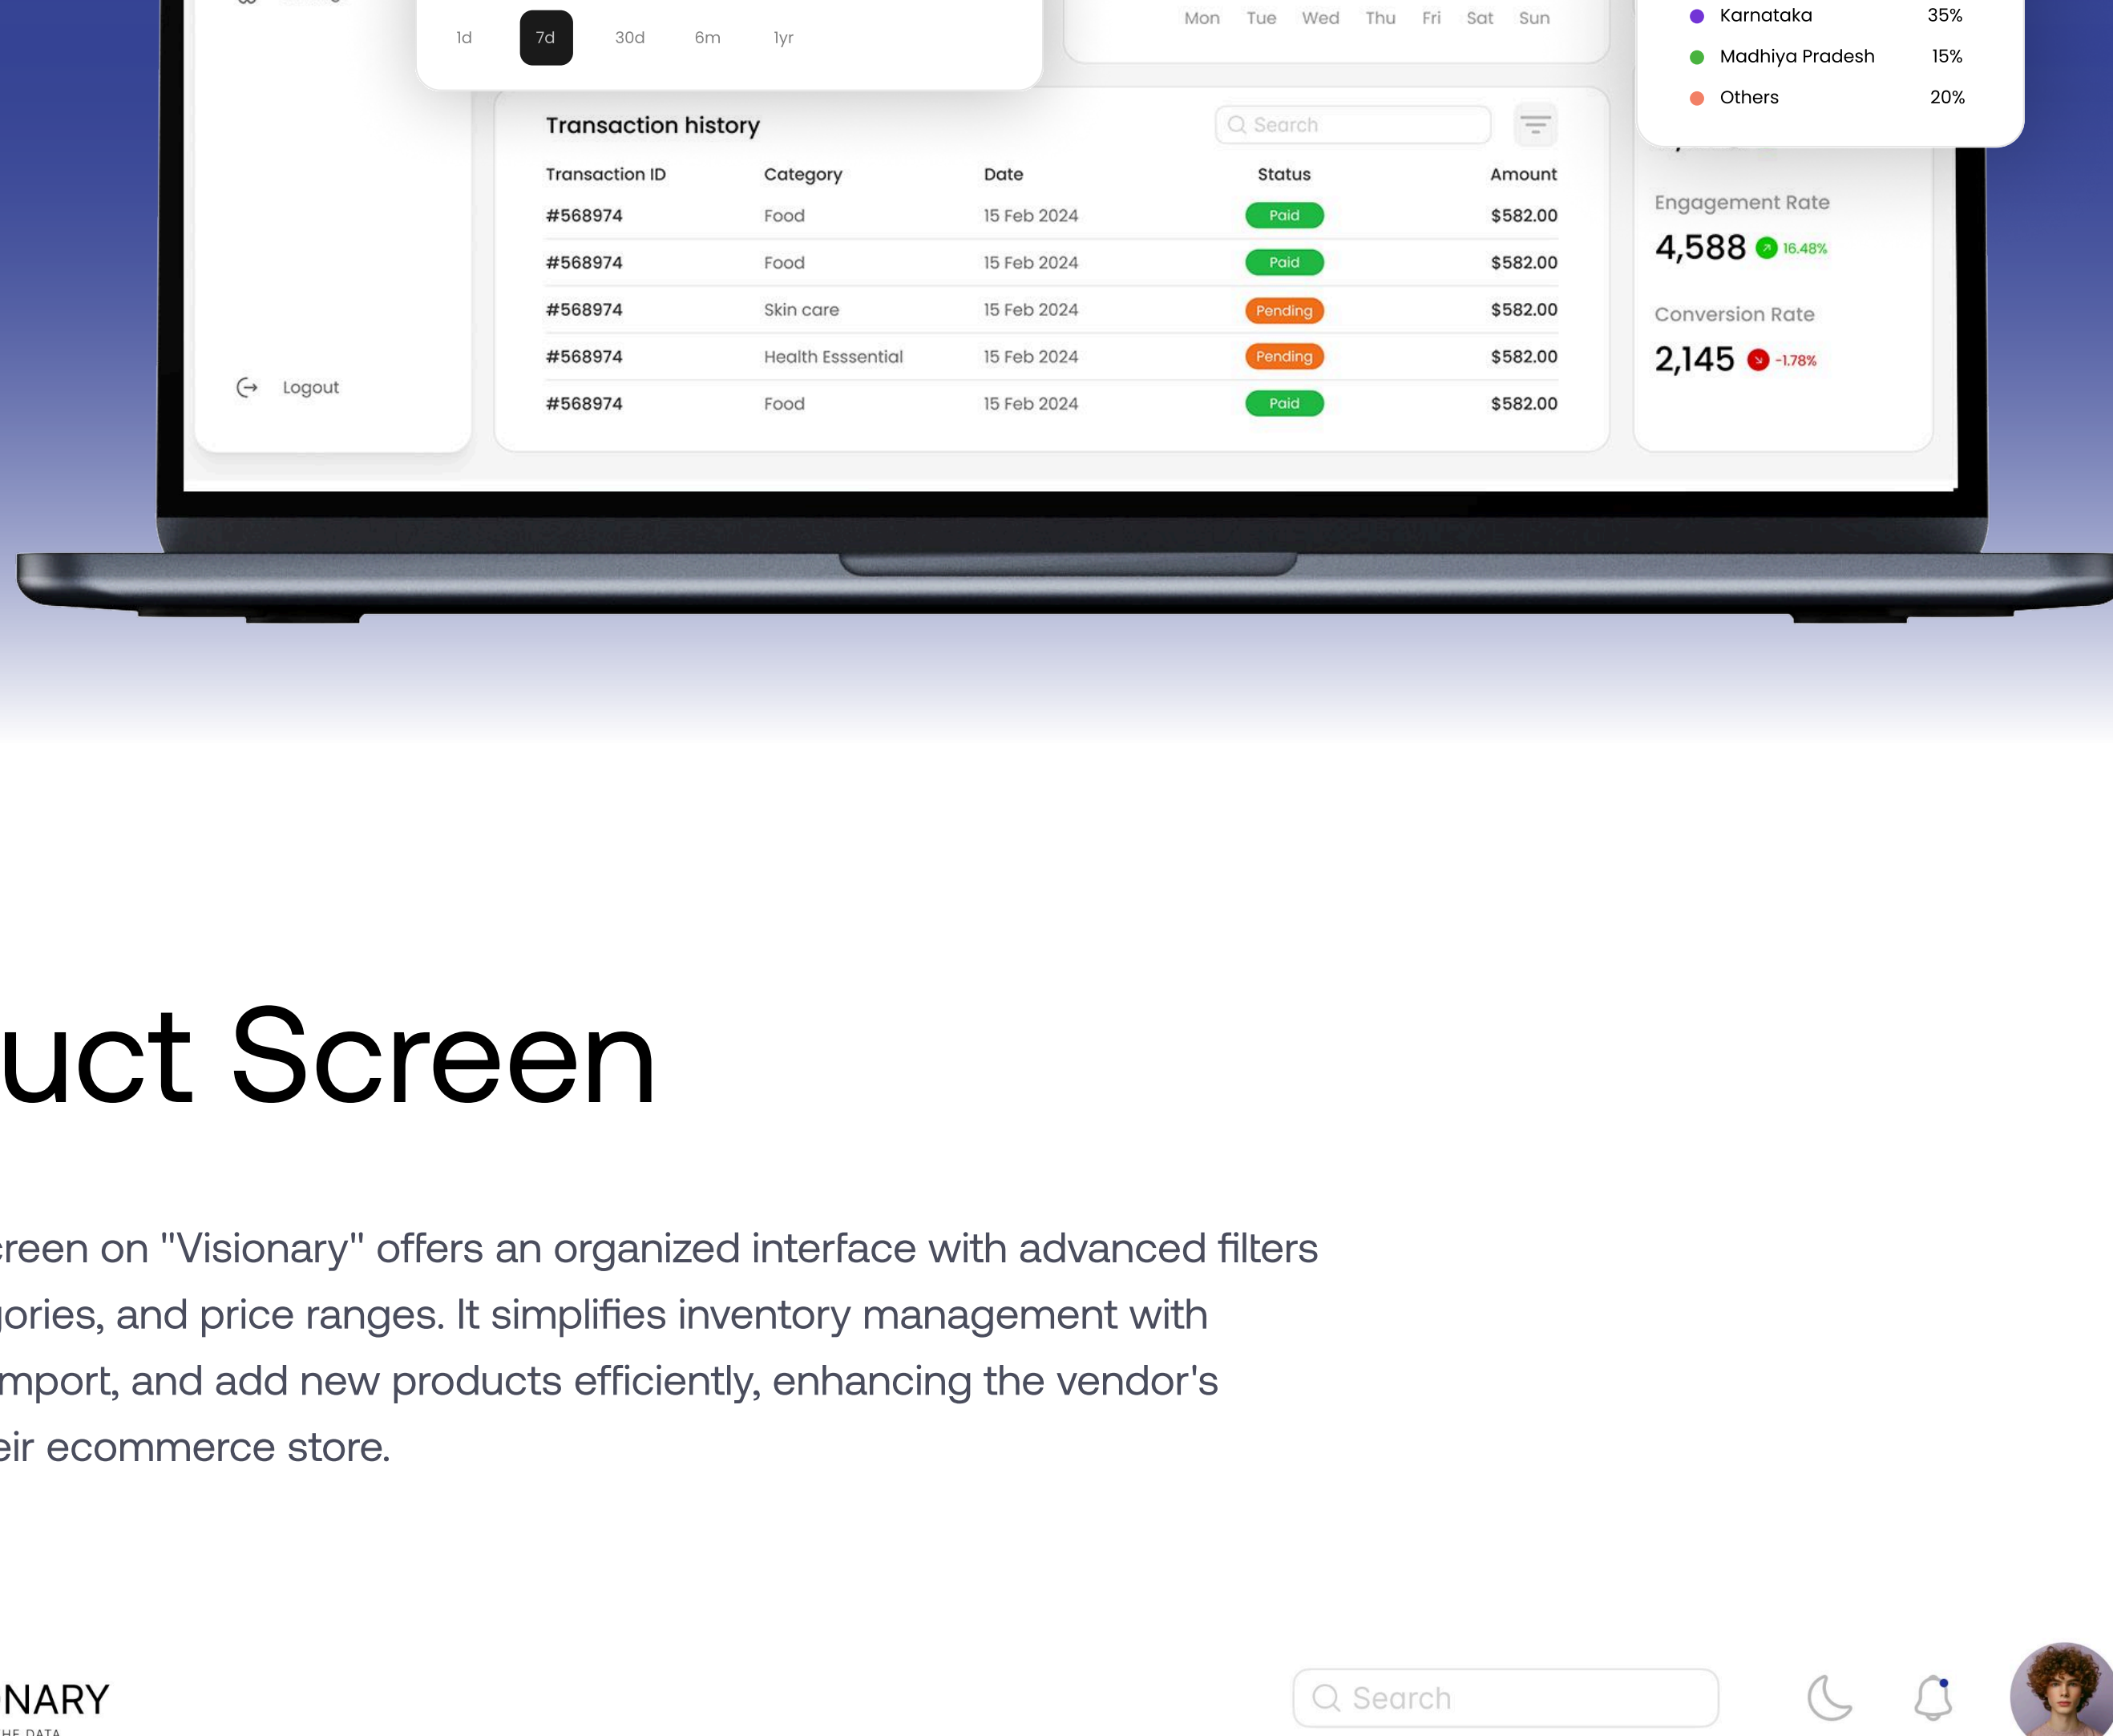

Solution

"Visionary" offers a comprehensive solution by providing a centralized inventory management dashboard for ecommerce vendors. By automating inventory tracking, order management, and sales analytics, it enables vendors to efficiently monitor total products, order statuses, sales reports, and customer details in real time.

Analytics View

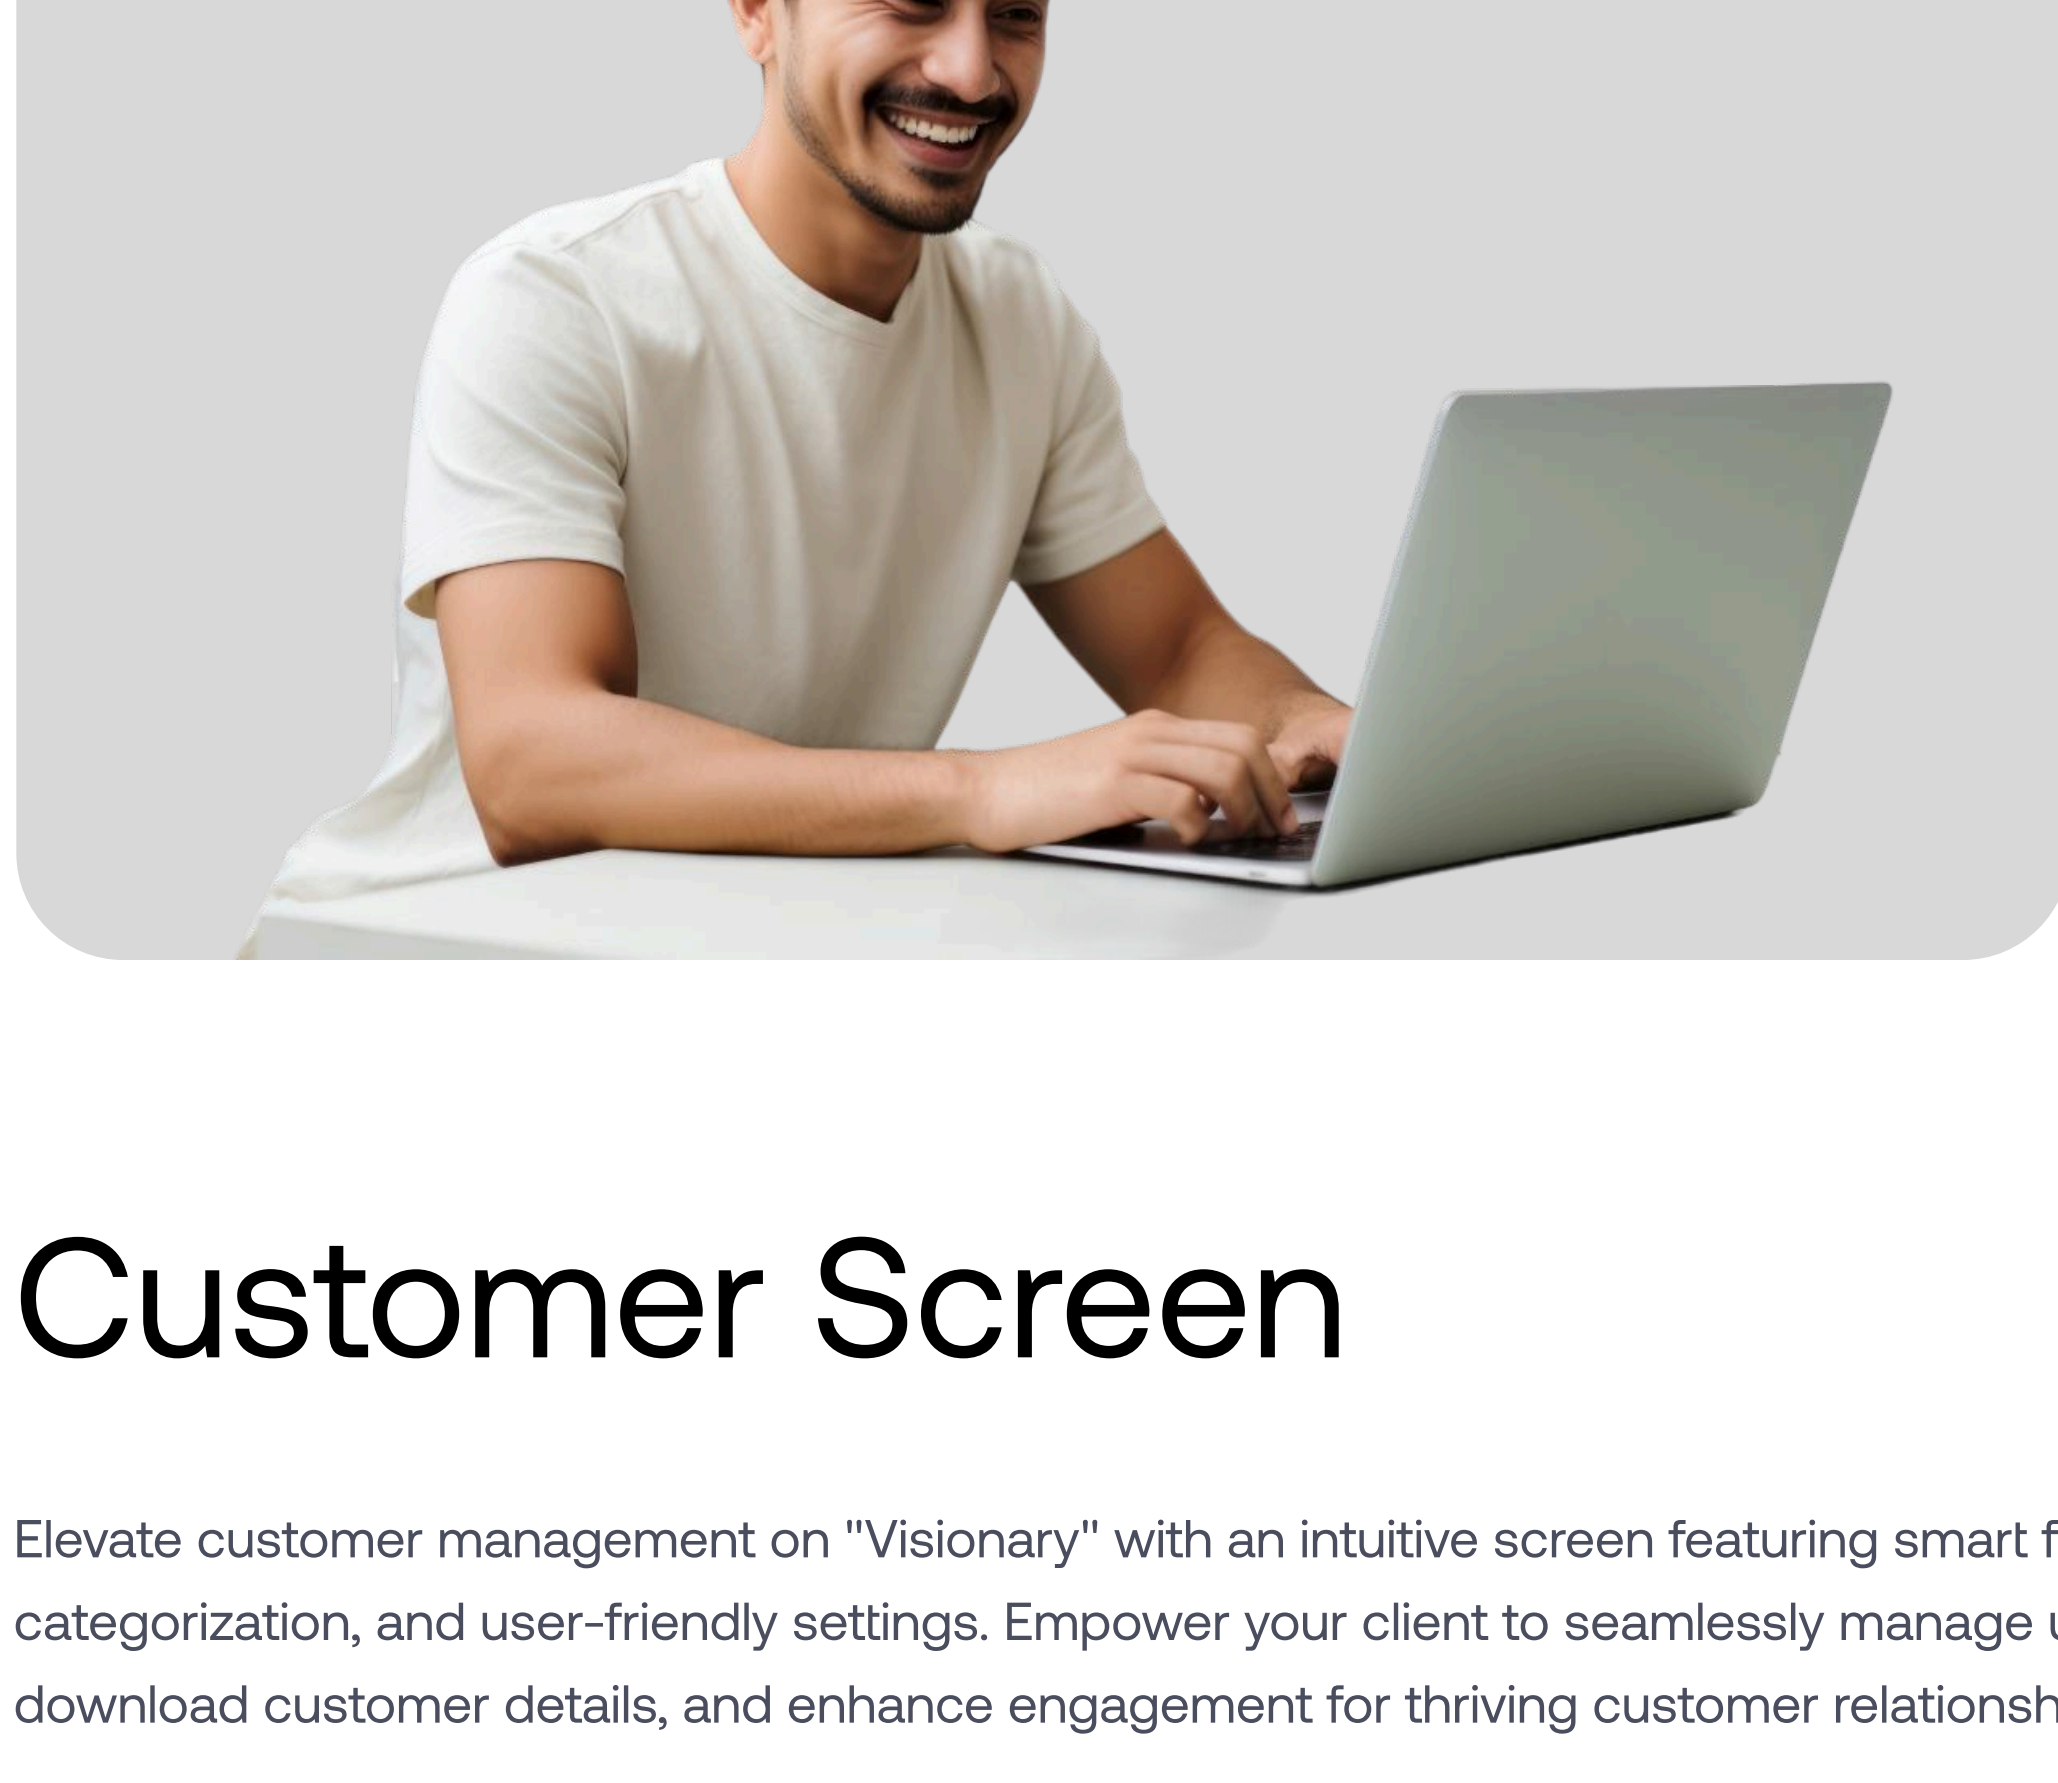

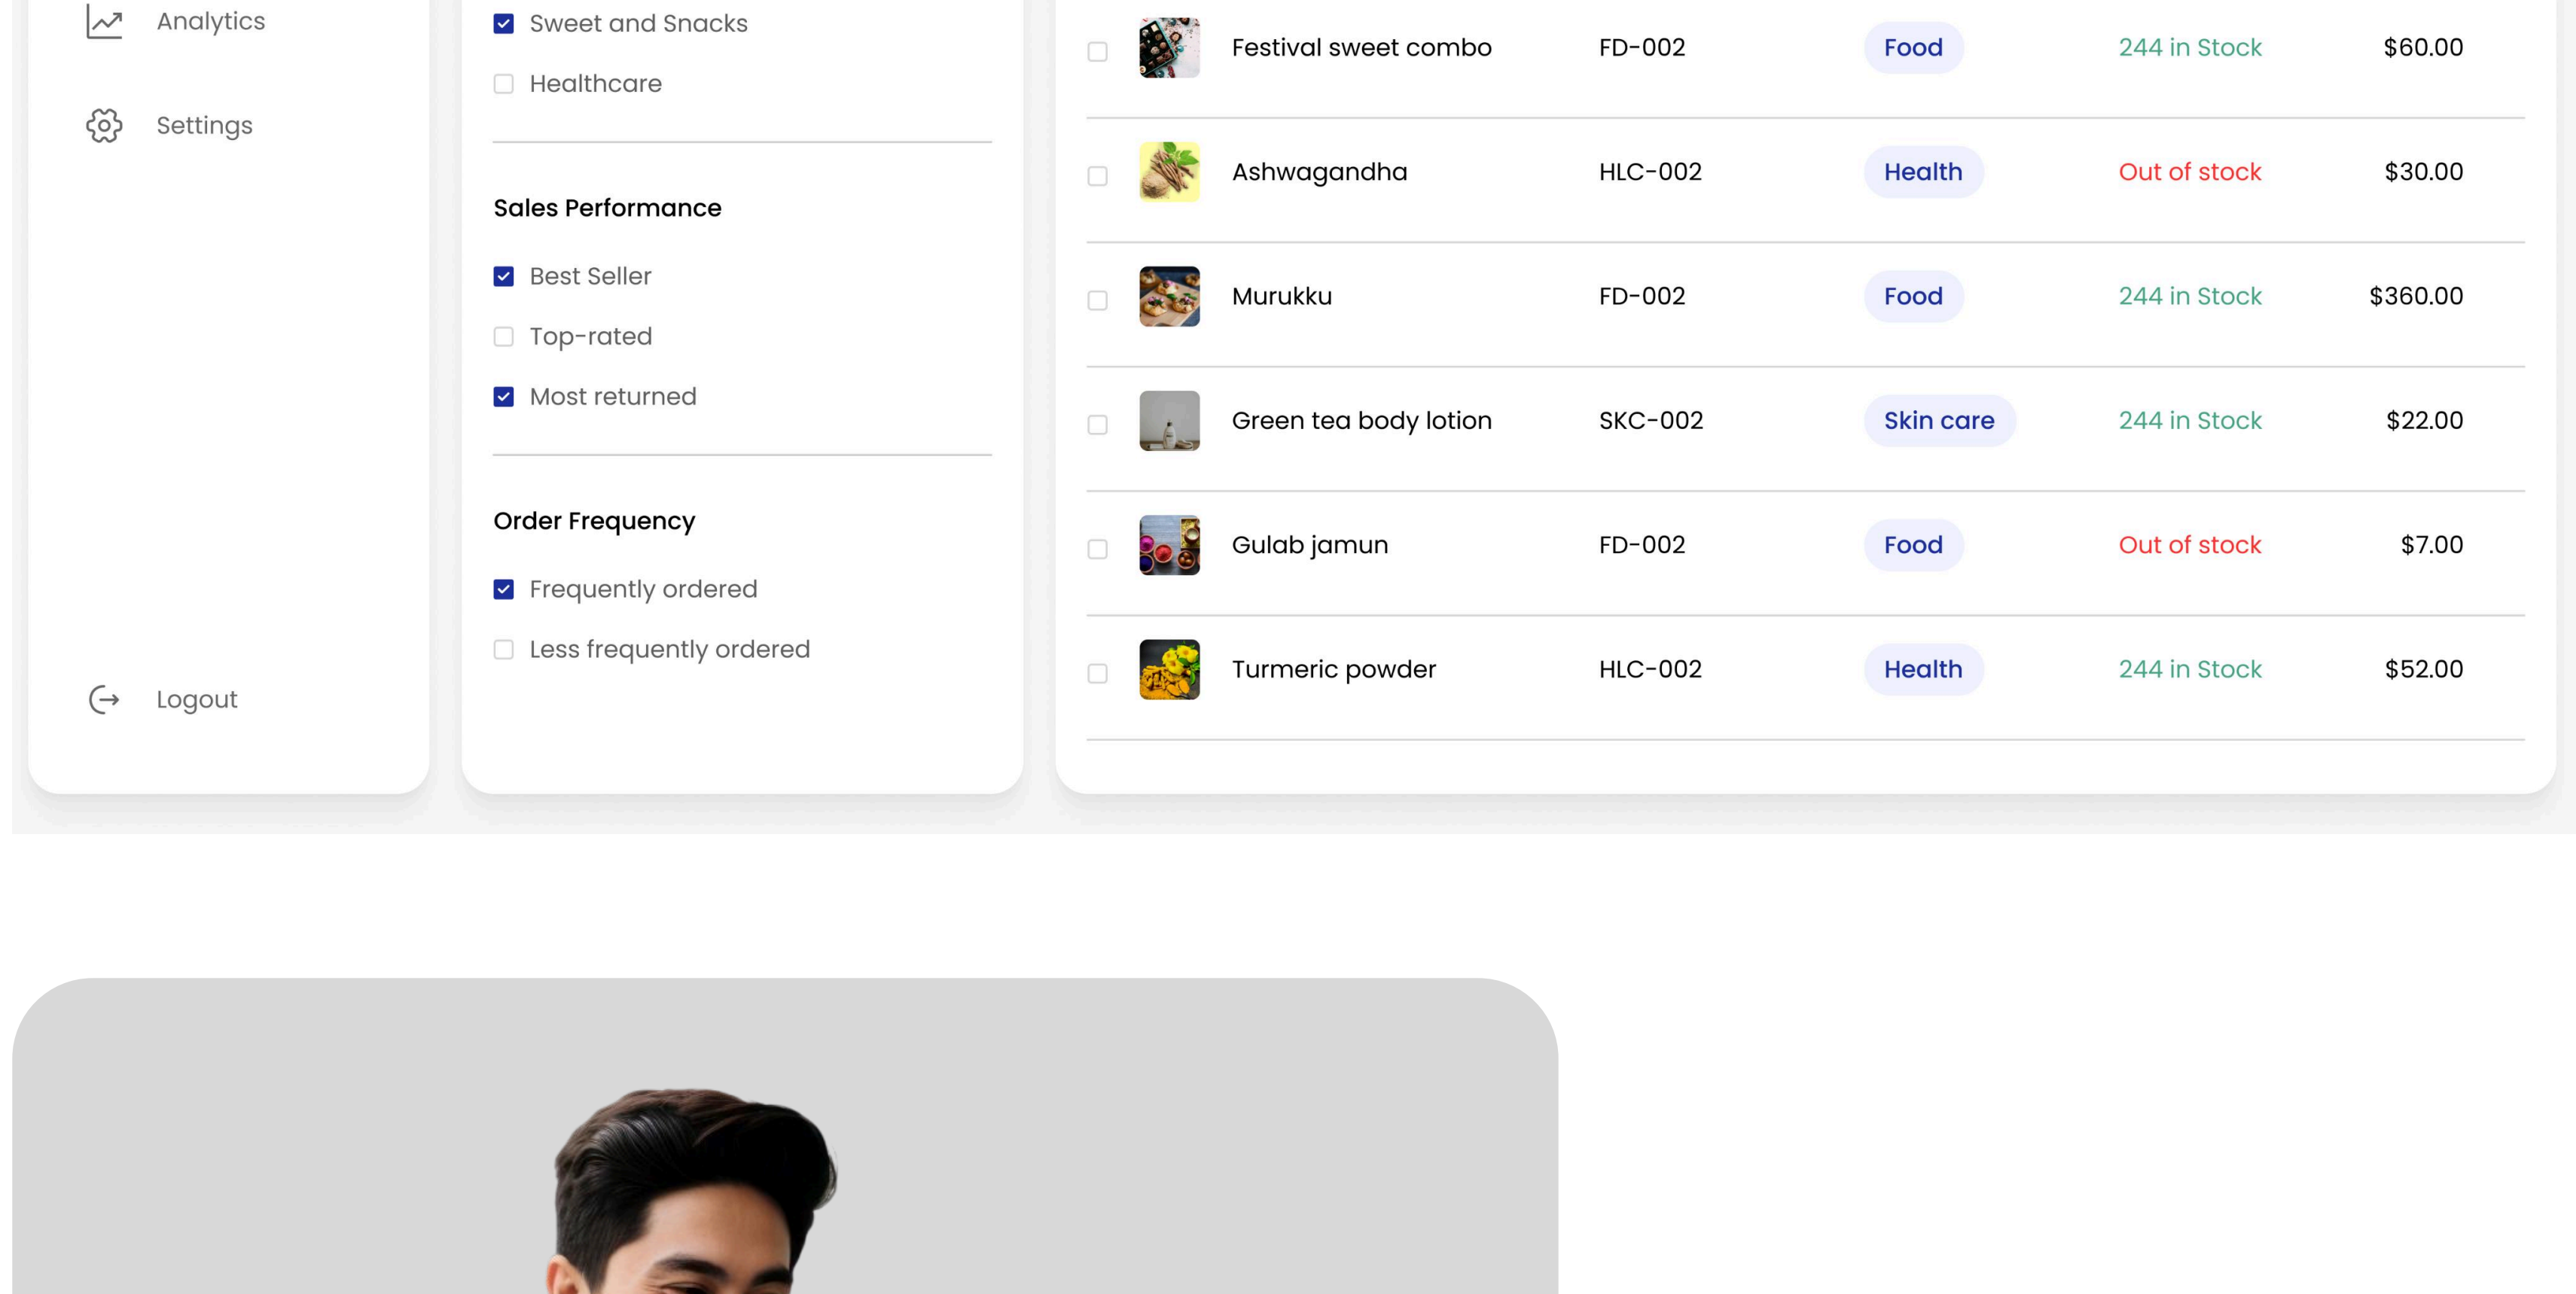

Overview Screen

Product Screen

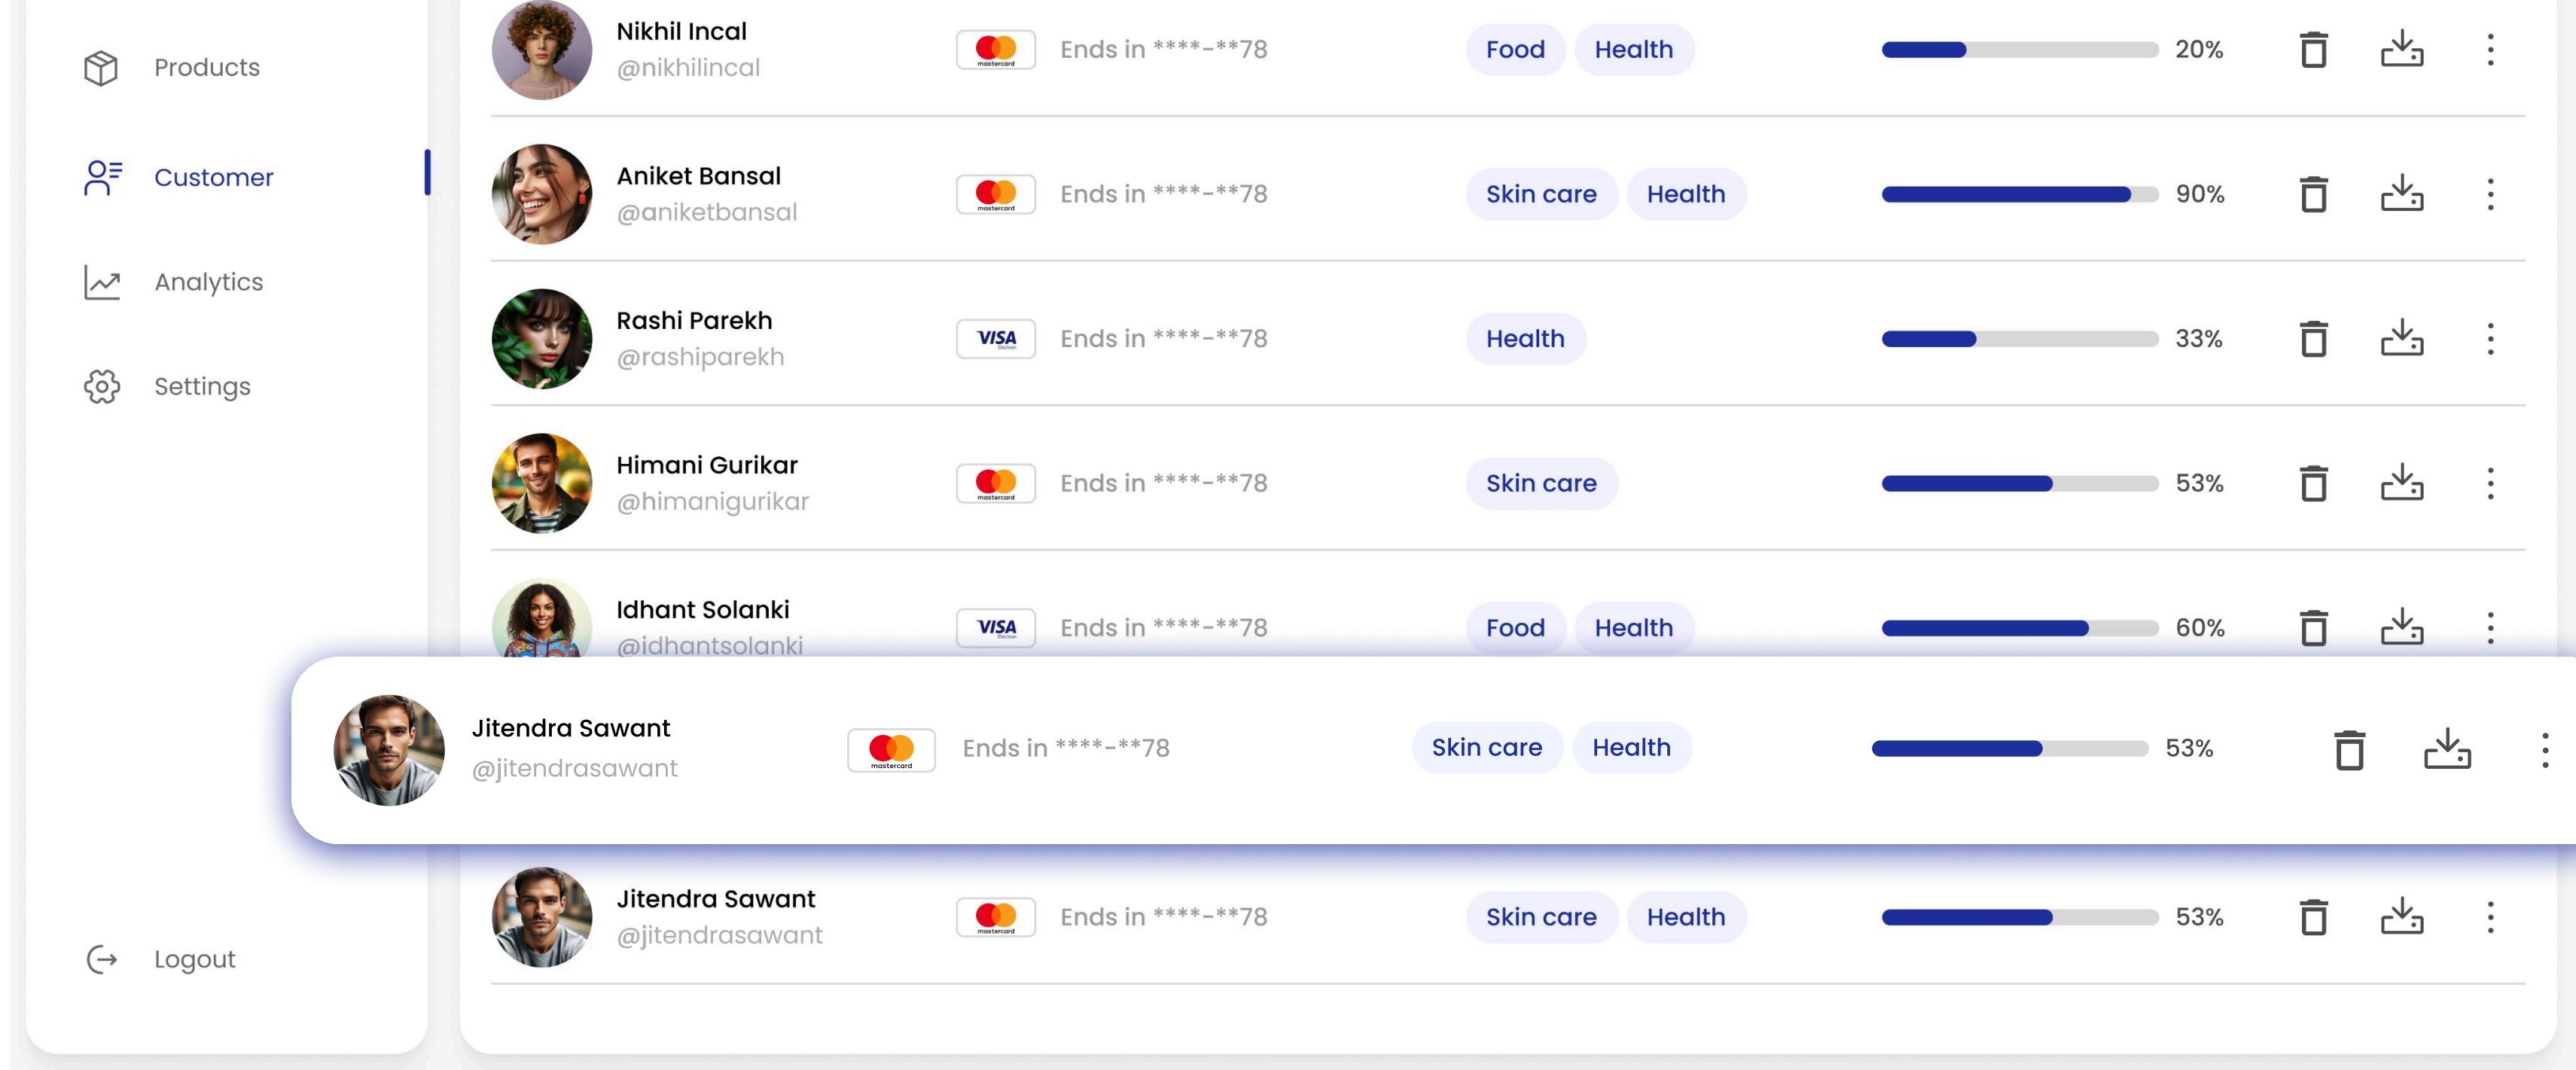

The product screen on "Visionary" offers an organized interface with advanced filters for sales, categories, and price ranges. It simplifies inventory management with options to list, import, and add new products efficiently, enhancing the vendor's control over their ecommerce store.

VISIONARY
SEE BEYOND THE DATA

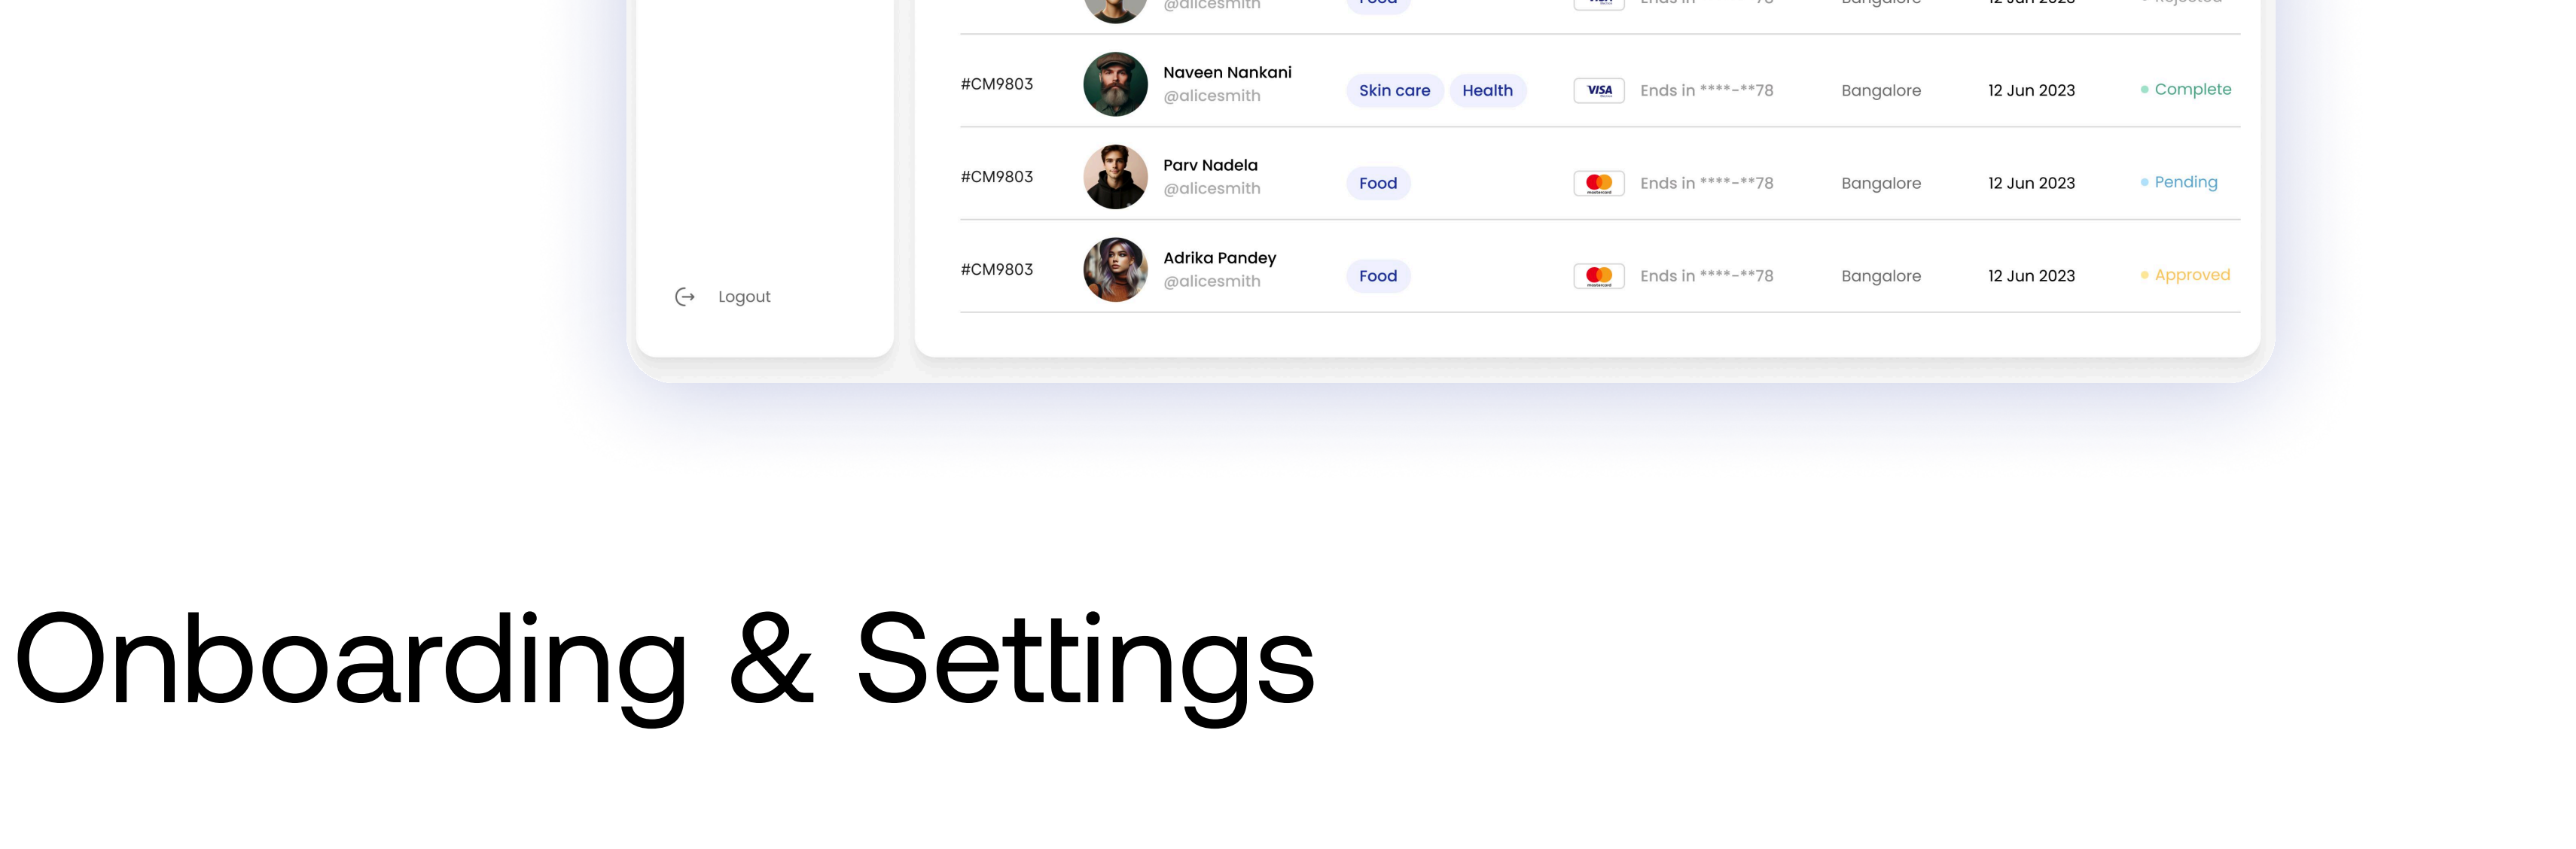

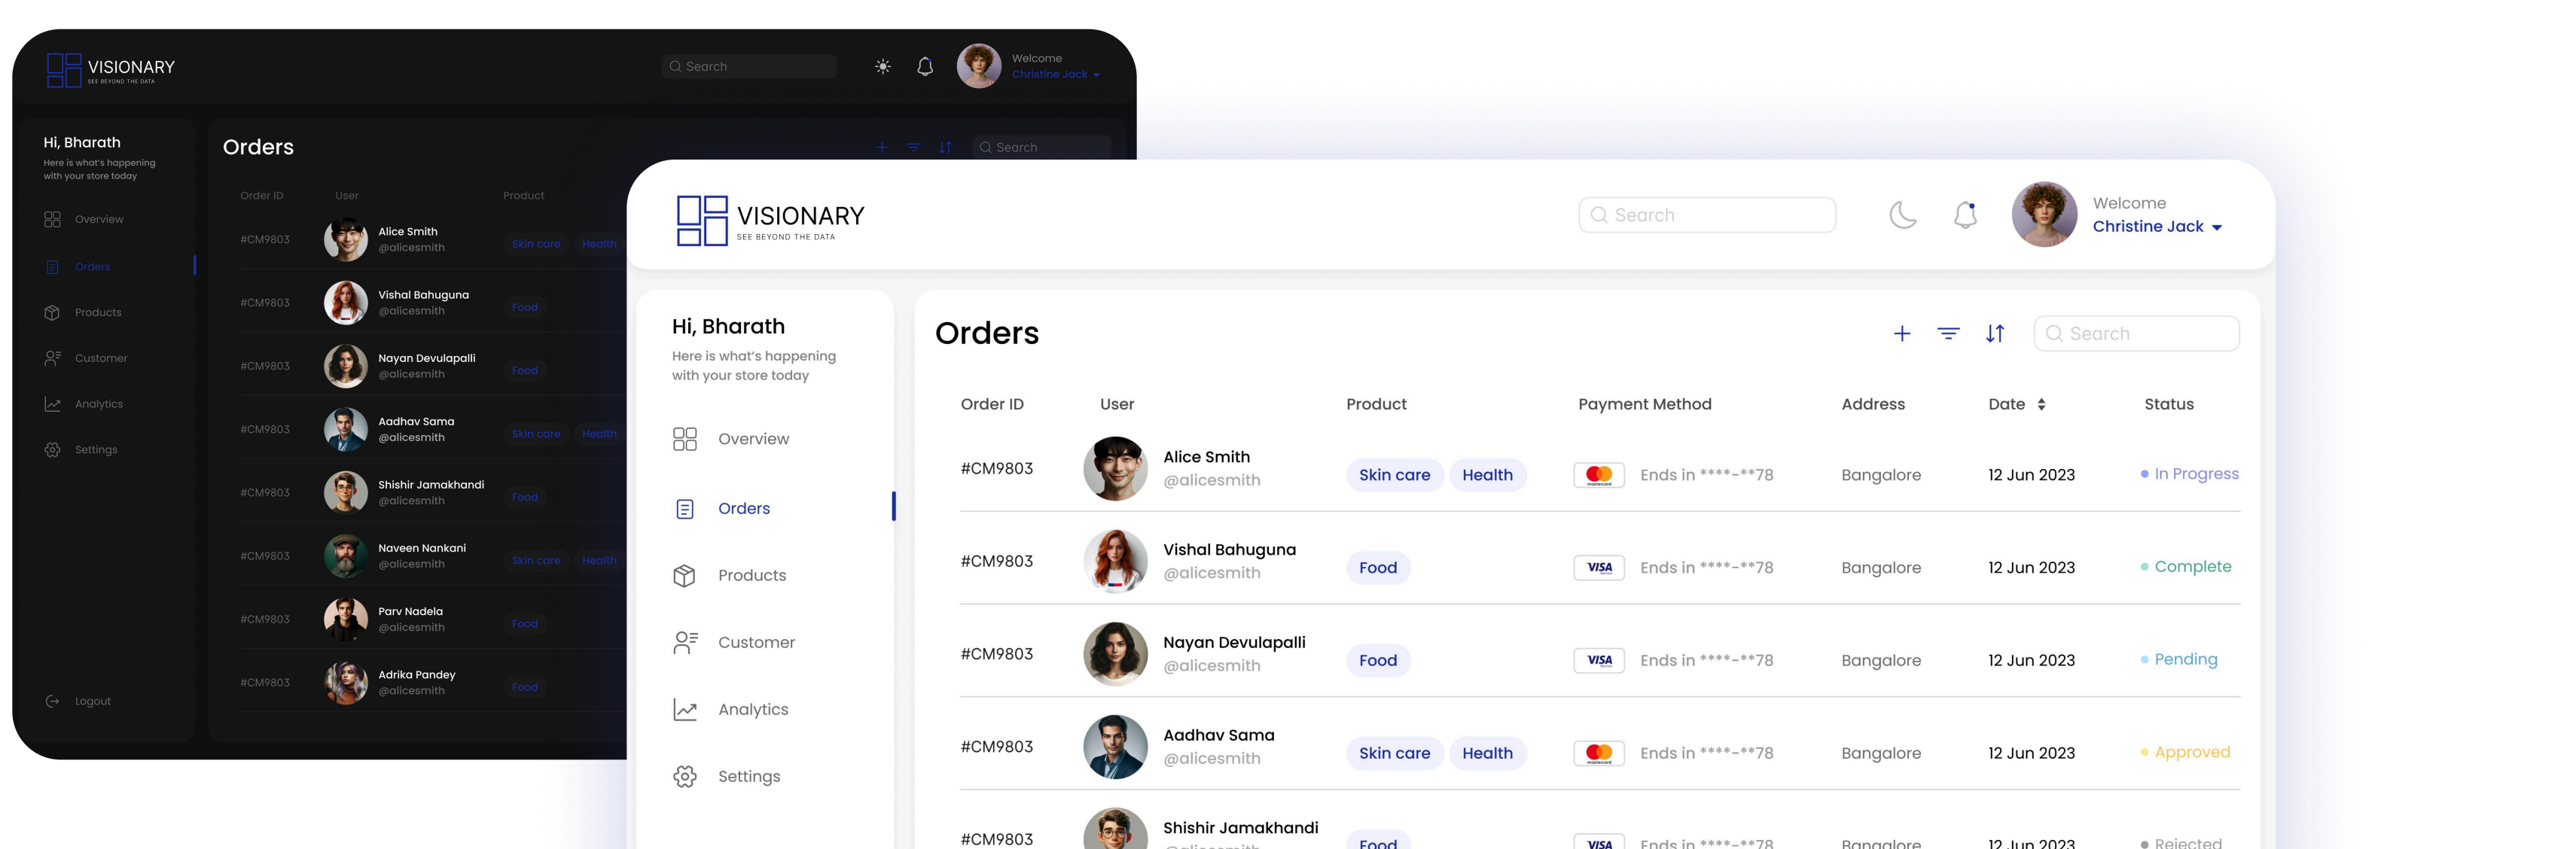

Customer Screen

Elevate customer management on "Visionary" with an intuitive screen featuring smart filters, easy categorization, and user-friendly settings. Empower your client to seamlessly manage users, download customer details, and enhance engagement for thriving customer relationships.

Order Screen

Seamlessly manage orders with smart filters, detailed categories, and customizable settings. Streamline transactions with swift product purchases, varied payment methods, and dynamic order tracking for an optimized client experience.
